

Practice 4

Following the Practice 3, define interfaces for life recovery and magic recovery.

```
public interface LifeRecoverable {  
    public static final int LIFERATE = 10;  
    public abstract double recoverLife();  
}
```

```
public interface MagicRecoverable {  
    public static final int MAGICRATE = 4;  
    public abstract double recoverMagic();  
}
```

Use these interfaces to add life recovery functionality for the Warrior and magic recovery functionality for the Witch.

Implement automatic life and magic recovery in the main function.
